

Downloading and Extracting Files

Note: One must have WinZip installed to unzip file. Go to <http://www.winzip.com> to download your copy.

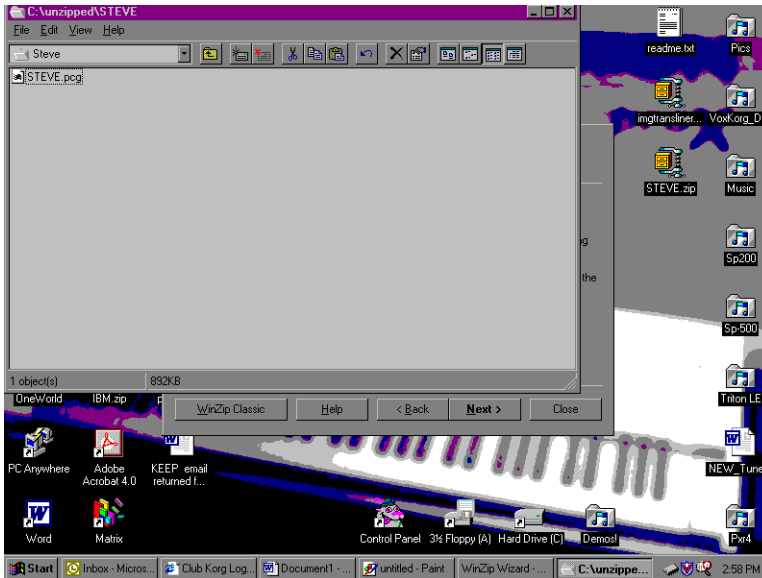

Once you have downloaded your zipped file from the internet (I usually save it to my desktop for easy access), simply place the cursor over it and double click

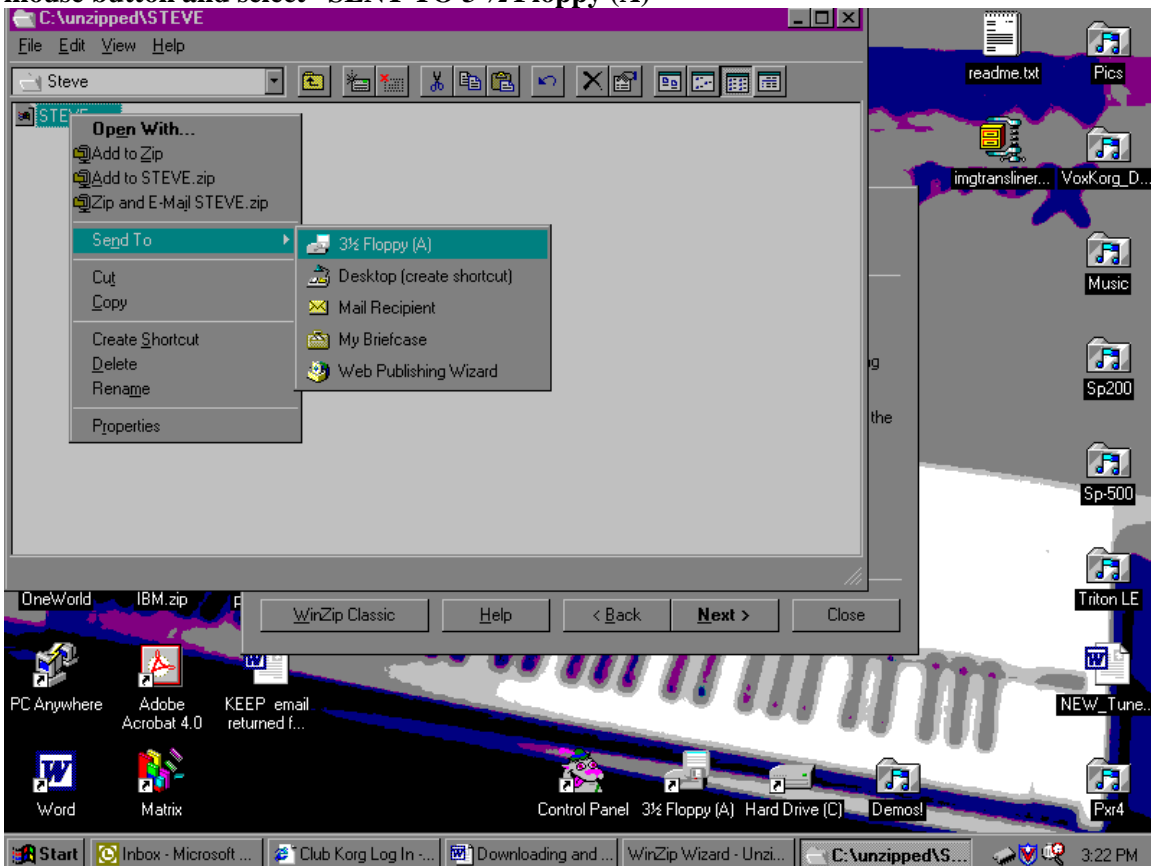

Now Winzip will automatically run

Follow the instructions with Winzip, once you have unzipped the file, a window will pop up with the contents

Place a formatted High Density (HD) floppy disk into your PC's disk drive. Highlight this file by moving the cursor over to it a click the left mouse button once. Then click the right mouse button and select "SENT TO 3 1/2 Floppy (A)"

Once the light goes off on the floppy drive, remove the disk from the drive. Take this disk over to the Korg keyboard. Go to disk mode and use the LOAD command. It is as easy as that! Enjoy.
